

Human Thinking, Enhanced | **Not replaced** | with AI

Maria Zaine - Visiting Lecturer
Senior Cyber Security Architect & Consultant

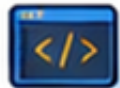

Learning Objectives

- Understanding responsible and ethical use of AI
- Prompt engineering and acceptable use of AI in learning
- Academic integrity, originality, and disclosure
- Distinguishing between human and AI-produced content.
- Human judgement, accountability, and limitations

What do we use AI for?

AND MORE!

Activity - Benefits of Using AI Among Students

Discussion - Concerns of Using AI Among Students

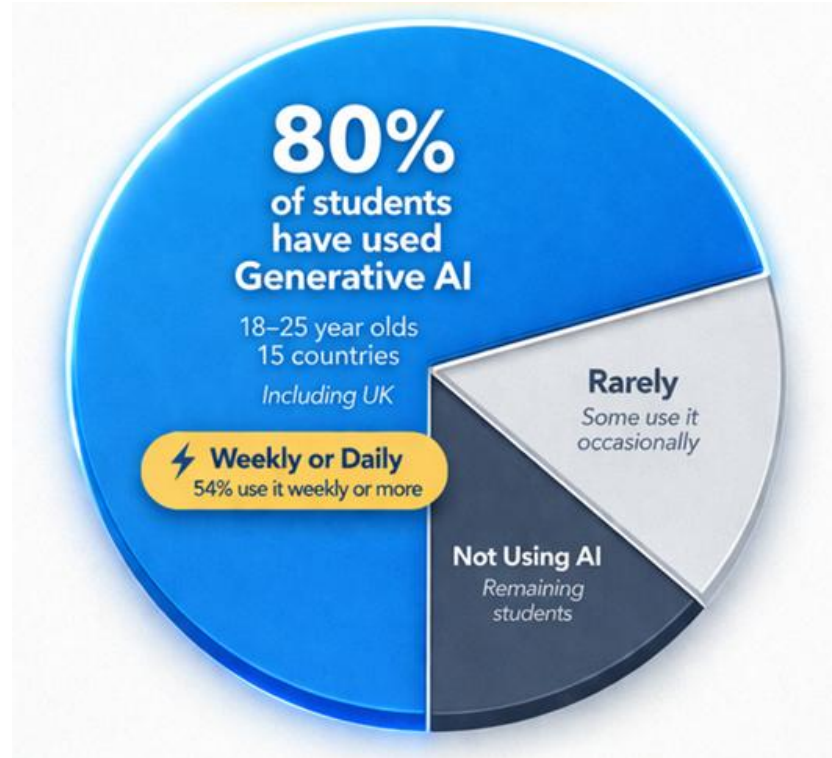

Students' Perspective

- Accuracy
- Bias
- Data privacy

Educators' Perspective

- Impact on critical thinking
- Academic integrity

Context

Understanding responsible and ethical use of AI

What can AI do?

1. Explain concepts
2. Summarise your work
3. Give you ideas
4. Answer questions
5. Review your work
6. Increase efficiency

What can AI NOT do?

1. Guarantee accuracy
2. Understand context
3. Replace your thinking
4. Think critically like a human
5. Fully verify information
6. Replace learning

Academic integrity, originality, and disclosure

- Transparency - Citing
- Avoid over-reliance
- Drive the prompts and ideas so it reflects YOUR understanding, YOUR creative thinking, and YOUR ideas.
- Avoid copying and pasting
- Avoid AI referencing

Let AI support your work, not do it for you

Prompt engineering and acceptable use of AI in learning

Give me themes from this research paper.	List 5-7 key themes from this research paper.	Identify 7 key themes from this research paper, explaining each theme in 1-3 sentences. For each theme, include a question that would help me reflect how I can apply and relate it to my project idea as a master's student. Lay out the output in a table format.
--	---	---

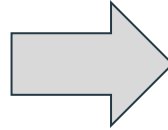

Tips

- Clear
- Specific
- Context
- Role

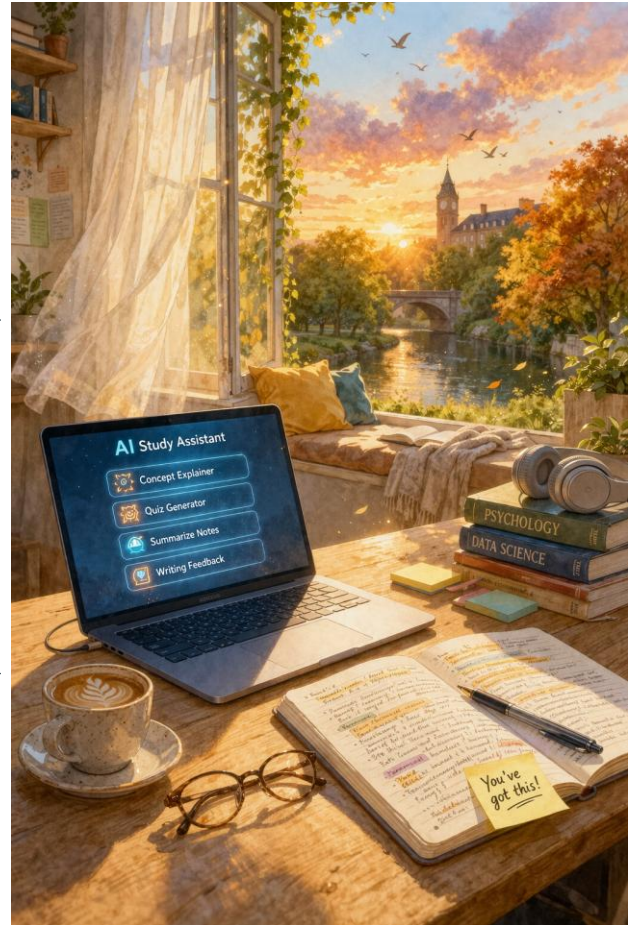

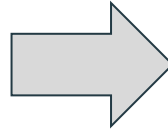

- Tutor me and show me clearly how to problem solve this question step-by-step.
- Cite real resources that can get verified
- Challenge me on this topic where appropriate
- Help me to critically analyse each argument

Real Example - Images

“This image was generated
using an AI tool”

“I came up with this
image”

Real Example - Research

“This research was supported by ChatGPT (OpenAI, 2025) in collecting and summarising key themes, as well as ensuring correct grammar is used throughout.”

“This research was solely written by me and no external tools were used to assist with this work”

Real Example - Project

“ChatGPT (Open AI, 2025), was used to structure and debug the code where needed to ensure...”

“All algorithms and implementations of this code were developed independently with no assistance”

This implies no external assistance — so don't use it if AI contributed to your ideas, writing, or analysis.

Unacceptable use of AI in learning

1. Using AI during closed-book/assessments
2. Copying and pasting
3. Inputting confidential, unpublished or sensitive data
4. Not disclosing AI usage
5. Using Ai to do all the work (analysis, reading, concluding, sumamrising etc.)

AI Tools

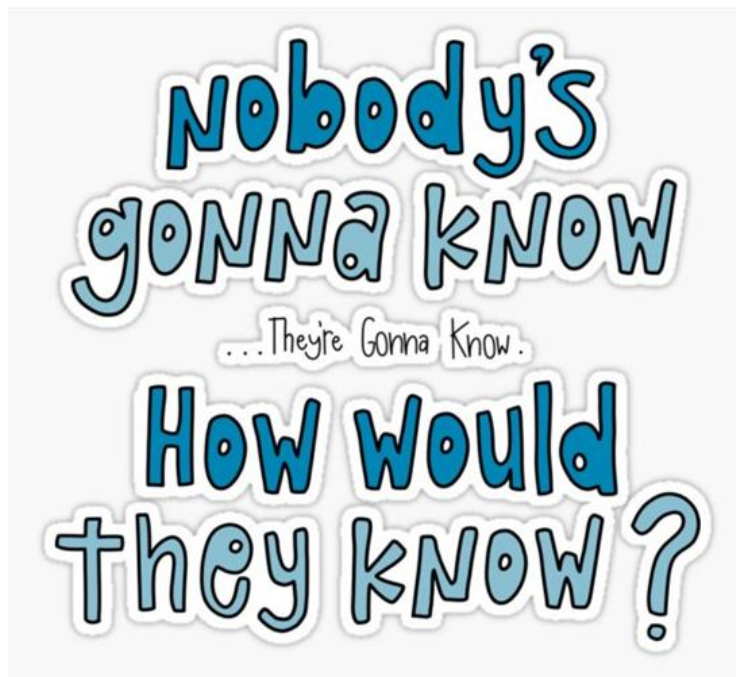

Leaderboard Models

Features ⓘ		
Model ↕	Context Window ↕	Creator ↕
Gemini 3.1 Pro Preview ⓘ	1m	 Google
GPT-5.4 (xhigh) ⓘ	1m	 OpenAI
GPT-5.3 Codex (xhigh) ⓘ	400k	 OpenAI
Claude Opus 4.6 (max) ⓘ	200k	 Anthropic
Claude Sonnet 4.6 (max) ⓘ	200k	 Anthropic

Who can find out if I'm using AI?

- AI detection tools
- Individual assessment process

***AI can be very obvious at times,
especially if you ask it to do all the
work from start to finish...***

Survey Support - Where YOU can contribute to :)

Student perspective on AI tools, AI skills and preparation for an AI in the workplace.
